

Rail Sector

Join a thriving rail ecosystem

Opportunity

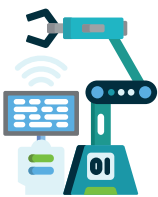

Rail investment

With a £100 billion pipeline, the UK is undergoing the largest rail investment programme in Europe.

Supply chain

Close proximity to three of the UK's four rolling stock manufacturing plants with Hitachi, Bombardier and the planned Siemens facility all within ninety minutes by road.

Advanced rail testing

Develop your high speed product line with the Institute for High Speed Rail and Systems Integration, globally the first of its kind, housing the world's most advanced rail testing rig.

Innovation

Develop the next generation of rolling stock at the UKRRIN Rolling Stock Innovation Centre, based at the University of Huddersfield.

Infrastructure expertise

York's cluster of international rail engineering consultancy firms is a leading centre for the design and project management of major railway infrastructure projects.

Company insight

IMI Precision Engineering

- Its Leeds facility specialises in valves, actuation and control systems. IMI Precision Engineering products are used in many pantograph systems across the world

William Cook

- Global specialists in complex safety critical components including bogies, couplers, drawgear assemblies and brake discs

Omicom Engineering

- Industry leading software to predict and prevent asset failure and solve network issues

Mott MacDonald

- Design and engineer heavy and light rail systems around the world including HS2 and Crossrail
